The CP246 is a single-width, 6U, CompactPCI/PXI module with 8 channels of Bridge Signal Conditioning feeding 8 independent 16-bit Analog to Digital Converters (ADC). This single-width solution incorporates both signal conditioning and ADC to eliminate the need for complex field wiring. 16 multi-function digital I/O channels also included.

**APPLICATIONS**
- Automotive Test Cells
- Industrial Monitoring and Control
- Automatic Test Equipment (ATE)
- General Purpose Digital Control or Monitoring

**FEATURES**
- Single slot solution for bridge conditioning and ADC
- 16-Bit 250 Ks/s ADC per channel
- Differential Inputs
- Bridge Completion for 1, 2, or 4 active arms
- Programmable shunt calibration, gain and excitation per channel
- 6 pole, low pass filter with programmable cutoff from 20 to 50 kHz
- Programmable bridge balance
- 16 multi-function digital I/O channels

CP246
8-Ch Bridge Signal Conditioner with ADC
GENERAL DESCRIPTION

The CP246 is a single-width, 6U, CompactPCI/PXI module with 8 channels of Bridge Signal Conditioning feeding 8 independent 16-bit Analog to Digital Converters (ADC). This single-width solution incorporates both signal conditioning and ADC to eliminate the need for complex field wiring.

The CP246 supports 10 wire transducer connections and contains fully programmable gain, shunt calibration, bridge balance, excitation and filter on a per channel basis. The maximum sampling rate of each analog to digital converter is 250 Ksamples per second. The ADC per channel architecture generates simultaneously sampled signals. PXI trigger and/or the front panel expansion bus provide a means to connect multiple CP246s together to expand the simultaneously sampled channel count.

The CP246 bridge conditioner inputs provide bridge completion, an excitation supply, anti-aliasing filtering and amplification. On-board bridge completion handles 120Ω, 350Ω or 1000Ω bridges in ¼, ½ and full configurations. The per-channel excitation sources are programmable from 0 to 10 volts in 4096 steps and contain alarm circuitry to monitor excitation supply health. Each channel can be programmed for either voltage or current excitation. The on-board filters can be ordered as either Bessel or Butterworth. Standard filter cutoff frequency selections include 20Hz, 200Hz, 1kHz, 2kHz or 5kHz, 10 kHz, 20 kHz and 50kHz. The filter may also be bypassed for wideband applications. The gain settings are also programmable from 1 to 2000 in a 1,2,5 progression. Bridge may be nulled using the on-board 12-bit DAC.

In addition to the signal conditioning and ADC’s, the CP246 provides 16 multi-function digital I/O channels. Any of these channels can be configured as a digital input, a digital output or selectively attached to a frequency in, counter in, or timer out channel.

SOFTWARE

The CP246 comes with a Plug and Play driver for configuring and using the device and application examples to illustrate its basic functionality.

In addition, KineticSystems includes a copy of SoftView, a simple yet powerful tool that integrates KineticSystems’ entire line of PXI/Compact PCI instruments under a single software package.

SoftView highlights include:

- Instrument Identification, configuration and operation
- Out-of-the-box solution to explore and evaluate an instrument’s capability
- Manage multiple instruments simultaneously
- Data collection, manipulation via a powerful formula engine, and display from digital and analog input channels
- Ability to drive digital and analog outputs
- Not just a Soft Front Panel for an instrument, but for an entire system

APPLICATION EXAMPLE

An SDK and application examples are provided to allow for custom application development.

www.kscorp.com
**CP246 BRIDGE SIGNAL CONDITIONING SPECIFICATIONS**

**Number channels:** 8 Differential

**Input:**
- **Input protection:** ±35 V, continuous
- **Input impedance:** 20 MΩ minimum, > 100 MΩ typical
- **Input coupling:** Programmable DC or AC
- **Analog Input Range:** ±10.24 Volts

**Gain:**
- **Programmable:** Yes
- **Gain Selections:** 1, 2, 5, 10, 20, 50, 100, 200, 500, 1000, and 2000

**Filter:**
- **Filter type:** 6 pole, Bessel or Butterworth
- **Programmable:** Yes, on a per channel basis
- **Filter cutoff frequencies:** Ordering option of 20 Hz, 200 Hz, 1 kHz, and 2 kHz, or 5 kHz, 10 kHz, 20 kHz, and 50 kHz. The filter may be bypassed for an extended frequency response to a –3dB point of 200 kHz. (Other options available on request)

**Excitation:**
- **Independent excitation source for each channel.**
- **Excitation type:** Voltage or Current
- **Excitation sense:** Programmable per channel for local or remote.
- **Excitation voltages:** Programmable per channel for 0 to 10 volts in 4096 steps.
- **Excitation current:** Programmable per channel for 0 to 50mA in 4096 steps.
- **Line regulation:** 0.003 %/V
- **Load regulation:** 0.00025 V/mA
- **Temperature Coefficient:** 2 ppm/°C

**Bridge Completion**
- **Programmable:** Yes
- **Bridge Configuration:** ¼, ½ and Full Bridge
- **Completion Resistance:** 120 Ω, 350 Ω or 1000 Ω

**Shunt Calibration:**
- **Programmable:** Yes
- **Shunt Resistor Location:** Internal or External (User Selected and Supplied)

**Bridge balance:**
- **Programmable:** Yes
- **Bridge Offset Null:** Utilizing 12-bit DAC
- **1200 Bridge:** ±24 mV
- **3500 Bridge:** ±70 mV
- **10000 Bridge:** ±200 mV

**Analog Input Connector Type:** 1 (2)- 68P High Density SCSI connector(s)

**CP246 ANALOG TO DIGITAL CONVERTER SPECIFICATIONS**

**Number of ADC’s:** 8, one per bridge input channel

**ADC Type:** Successive Approximation

**Resolution:** 16 bits, monotonic over operating temperature range

**Missing Codes:** None, guaranteed

**Maximum Sample (Conversion) Rate:** 250 kSamples/second (per channel)

**Sample Clock:**
- **Programmable:** Yes
- **Source(s):** Internal or External
- **Internal Selections:** .01 Hz to 250 kHz in 1 microsecond increments

**CP246 MULTIFUNCTION DIGITAL I/O SPECIFICATIONS**

**Number of Multifunction Digital I/O Channels:** 16 digital I/O channels.

(I/O may be configured as digital input, digital output or selectively attached to 2 frequency in, 2 counter in, or 2 timer out channels)

**I/O Type:** Single-ended TTL

**Direction Control:** Yes

**Input Termination:** Pulled-Up

**Input switching Threshold:**
- **“0” level:** 0.8 V maximum
- **“1” level:** 2.0 V minimum

**Output Voltage Level:** Programmable, 60/40 minimum
- **“0” level:** 0.4V maximum (iout = 2.5 mA)
- **“1” level:** 2.7V minimum (iout = 2.5 mA)

**Low Level Output Current:** 24 mA, maximum

**High Level Output Current:** -24 mA, maximum

**Input Current:** ±20 µA

**Frequency Channels (2):**
- **Frequency Measuring Range:** 0.06Hz to 1 MHz
- **Observation Window Period:** 1 ms

**Counter Channels (2):**
- **Counter Size:** 32 bits
- **Timer Channels (2):**
- **Timer Size:** 32 bits

**Digital I/O Connector Type:** 1 26 P Subminiature “D” connector

**CP246 OVERALL SPECIFICATIONS**

**Transfer Characteristics:**
- **Linearity:** Better than 0.005% FSR
- **Initial Accuracy, RTI (Reflected to Input):** After automatic calibration

Technical specifications contained within this publication are subject to change without notice.
Gain = 200 ± (50 µV + 0.002% of reading)
Gain = 500 ± (5 µV + 0.01% of reading)
Gain = 1000 ± (5 µV + 0.01% of reading)

Gain Stability:
All gains ± 15 ppm/°C maximum

Offset Stability, RTI:
± 2µV/°C maximum @ Gain = 1000

Common Mode Rejection Ratio:
-110 dB, DC to 120 Hz

Noise, RTI:
< 5 µV rms @ Gain = 1000, 20 Hz filter

Channel to Channel Crosstalk:
-95 dB

Power Requirements:
+5 V 3790 mA
+3.3 V 350 mA
+12 V 400 mA
-12 V 400 mA

Environmental and Mechanical:
Temperature range
Operational 0°C to +50°C
Storage -25°C to +75°C
Relative humidity 0 to 85%, non-condensing to 40°C
Cooling requirements 10 CFM
Dimensions 233.35 mm x 160 mm (6U CompactPCI/PXI module)
Front-panel potential Chassis ground

ORDERING INFORMATION

Model CP246-WXYZ 8-Ch CompactPCI/PXI Bridge Signal Conditioner with ADC

W: Filter Option
   A = 6-pole Bessel
   B = 6-pole Butterworth

X: Trifilar Transformer Option
   A = Without Trifilar Transformers
   B = With Trifilar Transformers

Y: Filter Cutoff Frequency
   1 = Filter Cutoff of 20 Hz, 200 Hz, 1kHz and 2 kHz
   2 = Filter Cutoff of 5 kHz, 10 kHz, 20 kHz and 50 kHz

Z: Completion Resistors
   1 = 120Ω
   2 = 350Ω
   3 = 1000Ω
